New isolated and purified polypeptide with a protein transduction useful for delivering small molecules, proteins and nucleic acids intracellular compartment of a cell. to an

Claim 1; SEQ ID NO 1; 60pp; English.

The present sequence represents a peptide which functions as a protein transduction domain (PTD), and is capable of delivering small molecules, proteins, and nucleic acids to an intracellular compartment of a cell. An amino terminal lysine linker improves the efficiency of the PTD can be used in PTD-cargo moiety complexes that can reversibly immortalise cells and increase cell viability in culture. The present sequence is a reverse isomer of ADS17641, a previously identified internalising

Sequence 12 AA;

                                                                                                                                                                                                                                                                                                                                                                                    The specification describes peptides which function as a protein transduction domain (PTD), and are capable of delivering small molecules, proteins, and nucleic acids to an intracellular compartment of a cell. An amino terminal lysine linker improves the efficiency of the PTD. The PTD can be used in PTD-cargo moiety complexes that can reversibly immortalise cells and increase cell viability in culture. The present sequence represents PTD peptide used in an experiment to determine the transduction efficiency of inverted isomers of PTDs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated and purified polypeptide with a protein transduction useful for delivering small molecules, proteins and nucleic acids intracellular compartment of a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    04-MAR-2003;

An amino terminal lysine linker improves the efficiency of the PTD. The PTD can be used in PTD-cargo molety complexes that can reversibly immortalise cells and increase cell viability in culture. The present sequence represents PTD peptide used in an experiment to determine the transduction efficiency of inverted isomers of PTDs.
                                                   protein transduction domain; PTD; PTD-cargo moiety complex; cell immortalisation; cell viability; internalising peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated and purified polypeptide with a protein transduction useful for delivering small molecules, proteins and nucleic acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              04-MAR-2003; 2003US-0451243P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents a peptide which functions as a protein transduction domain (PTD), and is capable of delivering small molecules, proteins, and nucleic acids to an intracellular compartment of a cell. An amino terminal lysine linker improves the efficiency of the PTD. The PTD can be used in PTD-cargo molety complexes that can reversibly immortalise cells and increase cell viability in culture. The present PTD has a lysine linker.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated and purified polypeptide with a protein transduction useful for delivering small molecules, proteins and nucleic acids intracellular compartment of a cell.

An amino terminal lysine linker improves the efficiency of the PTD. The PTD can be used in PTD-cargo moiety complexes that can reversibly immortalise cells and increase cell viability in culture. ADS17634-ADS17638 represent PTD peptides used in an experiment to determine if introduction of a nuclear localisation signal affects translocation of a PTD-cargo moiety

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0
```

The present sequence represents a peptide which functions as a protein transduction domain (PTD), and is capable of delivering small molecules, proteins, and nucleic acids to an intracellular compartment of a cell. An amino terminal lysine linker improves the efficiency of the PTD. The PTD can be used in PTD-cargo moiety complexes that can reversibly immortalise

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match
                                                                                 Matches
                                                                                                                                  Query Match
                                                                                                                                                                                                                                                            The specification describes peptides which function as a protein transduction domain (PTD), and are capable of delivering small molecules, proteins, and nucleic acids to an intracellular compartment of a cell. An amino terminal lysine linker improves the efficiency of the PTD. The PTD can be used in PTD-cargo moiety complexes that can reversibly immortalise cells and increase cell viability in culture. ADS17634-ADS17638 represent PTD peptides used in an experiment to determine if introduction of a nuclear localisation signal affects translocation of a PTD-cargo moiety
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cells and increase cell viability in culture. The present PTD has lysine linker and a nuclear localisation signal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     protein transduction domain; PTD; PTD-cargo moiety complex; cell immortalisation; cell viability; internalising peptide

                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents a peptide which functions as a protein transduction domain (PTD), and is capable of delivering small molecules, proteins, and nucleic acids to an intracellular compartment of a cell. An amino terminal lysine linker improves the efficiency of the PTD can be used in PTD-cargo moiety complexes that can reversibly immortalise cells and increase cell viability in culture. The present PTD has a lysine linker and 2 nuclear localisation signals.
                                                                                                                                                                                                                                                                                                                                                                       Sequence 27
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Disclosure; SEQ ID NO 5; 60pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated and purified polypeptide with a protein transduction useful for delivering small molecules, proteins and nucleic acids intracellular compartment of a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WPI; 2004-653708/63

An amino terminal lysine linker improves the efficiency of the PTD. The PTD can be used in PTD-cargo molety complexes that can reversibly immortalise cells and increase cell viability in culture. ADS17634-ADS17638 represent PTD peptides used in an experiment to determine if introduction of a nuclear localisation signal affects translocation of a PTD-cargo moiety
                                                                                                                                                                                                                                                                                                                                                      protein transduction domain; PTD; PTD-cargo moiety complex; cell immortalisation; cell viability; internalising peptide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated and purified polypeptide with a protein transduction domain, useful for delivering small molecules, proteins and nucleic acids to an intracellular compartment of a cell.

An amino terminal lysine linker improves the efficiency of the PTD. The PTD can be used in PTD-cargo molety complexes that can reversibly immortalise cells and increase cell viability in culture. ADS17634-ADS17638 represent PTD peptides used in an experiment to determine if introduction of a nuclear localisation signal affects translocation of a PTD-cargo molety

An amino terminal lysine linker improves the efficiency of the PTD. The PTD can be used in PTD-cargo molety complexes that can reversibly immortalise cells and increase cell viability in culture. ADSI7634-ADSI7634 represent PTD peptides used in an experiment to determine if introduction of a nuclear localisation signal affects translocation of a PTD-cargo moiety

A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Mitcham (Zhang Y, Barth B,
                           The invention relates to an isolated polynucleotide (ACF64435-ACF64733) encoding a Propionibacterium acnes protein. The invention also relates to polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to immunogenic fragments of P. acnes polypeptides. The invention additionally encompasses expression vectors and host cells comprising a polynucleotide of the invention; antibodies against polypeptides of the invention; fusion proteins comprising a polypeptide of the invention; antibodies against polypeptide of the invention; antibodies specific for a P. acnes method for stimulating an immune response specific for a P. acnes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                              New Propionibacterium acnes polypeptides and polynucleotides encoding the polypeptide, useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          N-PSDB;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Propionibacterium acnes predicted ORF-encoded polypeptide #11720

The vaccine composition is useful for the stimulation of an immune response against P. acnes, or for treating acne, and the kit is useful for performing a diagnostic assay. The present conditions are presents a polypeptide predicted to be encoded by an ORF (open creating frame) contained within the P. acnes polynucleotides of the printed specification, but was obtained in electronic format directly contained within the p. acnes polynucleotides of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         for therapeutic intervention in treating a disease associated with altered mitochondrial function. Specifically, it refers to a method for identifying proteins of the human heart mitochondrial proteome that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial encephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy ragged red fibre syndrome (MERRF) or cancer. Accordingly, these compositions have neuroprotective, nootropic, antidiabetic, anticonvulsant, antiarthritic, osteopathic, ophthalmological and cytostatic activities. This polypeptide sequence is a human heart mitochondrial protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                  Nakagawa

suc present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from

; Sequence 8155, Application US/09513999C
; Patent No. 6783961
; GENERAL INFORMATION:
   APPLICANT: Dumas Milne Edwards, J.B.
   APPLICANT: Duclert, A.
   APPLICANT: Duclert, A.
   APPLICANT: Giordano, J.Y.
   TITLE OF INVENTION: Expressed Sequence Tags and Enc.
   Patent No. 6783961
; PILE REFERENCE: 59.US2.REG
; CURRENT APPLICATION NUMBER: US/09/513,999C
; CURRENT FILING DATE: 2000-02-24
; PRIOR APPLICATION NUMBER: US 60/122,487
; PRIOR FILING DATE: 1999-02-26
                                                                                                                                                                                                                                                                                                                                                                                                                                     APPLICANT: Pompejus, Markus
APPLICANT: Kroger, Burkhard
